

Kevin Putnam

Software Engineer and Technical Writer

Portland, OR | kevin.putnam@gmail.com | 503.501.6064 | [LinkedIn](#)

Summary

Nearly 20 years in software, including 7+ years supporting technical documentation Intel. Skilled at **translating and organizing complex ideas into functional collateral** including benchmarks, competitive analyses, developer guides, and partner training. Experienced in **Python/C++ software development**, and **CI/CD automation**. Adept at collaborating across engineering, product, and marketing teams to drive adoption of cutting-edge platforms.

Experience

Intel Corporation | Portland, OR

Cloud Software Engineering Lead – SATG/InfoDev | Apr 2018 – Jul 2025

- Re-engineered Intel's developer documentation pipeline for oneAPI, ClearLinux, and OpenVINO programs.
- Partnered with engineering, product, and marketing teams to produce benchmarks, user guides, and training content supporting internal and external adoption.
- Architected GitHub-based CI/CD systems enabling 100% documentation coverage, automated publishing, and synchronized code/docs releases.
- Developed sphinx2dita, bridging open-source Sphinx workflows with enterprise publishing systems, improving scale and reuse.
- Maintained and reorganized ClearLinux.org documentation, empowering developers to optimize performance on Intel hardware.
- Bootstrapped documentation projects turning scattered READMEs into coherent, structured content.

Software Engineer – Pathfinding Architecture Team | Feb 2015 – Apr 2018

- Delivered tuning guides, performance data, and modeling tools for Intel® Optane™ SSD P4800X, influencing product requirements and architecture decisions.
- Built latency-reduction POC for RDMA workloads used in infrastructure evaluations.
- Produced collateral and insights that informed both technical and product marketing teams.

Software Engineering Manager – Tools & Validation Team | Apr 2014 – Jan 2015

- Led validation of emerging SSD technologies (NVMe prototypes, early firmware).
- Released SRMU tool, adopted by 15+ vendors to detect and mitigate UI lag in Windows.
- Built Android/Linux toolkits for real-world performance characterization of storage systems.

Software Engineer – Validation & Tools | 2006 – 2014

- Designed validation features for enterprise SSD firmware under power-failure scenarios.
 - Delivered well received public facing storage technology demos
 - Authored test plans and tools adopted across Intel's SSD production org.
 - Supported launch of enterprise-class DC S3700 SSD with benchmarks and validation collateral.
-

Education

BS Mathematics, Virginia Tech
MA English, Virginia Tech

Skills

Technical Marketing & Enablement

- Benchmarks, tuning guides, competitive analysis
- Developer blogs, tutorials, walkthroughs
- Public demo development and delivery

Software & Tooling

- Python, C/C++
- LaTeX
- Sphinx / reStructuredText / Markdown / DITA
- Doxygen, API docs integration

Automation & Systems

- CI/CD: GitHub Actions, Jenkins
- Internationalization / Localization (.po, gettext)
- Markdown ↔ rST conversion & automation
- Git-based workflows & open-source collaboration
